Prompts & Integrations

Enhance your apps with powerful built-in integrations

Lovable offers a wide range of built-in integrations to empower your applications with advanced capabilities. Whether you need AI-powered processing, document automation, or UI enhancements, Lovable has you covered.

AI & LLMs

Integrate leading AI models to build intelligent applications that enhance user experience, automate workflows, and generate content:

- OpenAl's model Ideal for summarization, analysis, and content generation. Fast and reliable.
- Anthropic's latest model Excels in complex reasoning and deep analysis.
- Google's latest model Strong in logical reasoning and long-context processing.
- **Groq** The fastest Al model in Create, powered by Llama 3.

(i) Create a tool that uses [AI model] for content generation.

Cohere Command R+ – Scalable LLM designed for business applications.

ixample prompts to get started:	
Build a grammar-enhancing writing assistant using [AI model] .	
① Create a chatbot that provides customer support using [AI model] .	
① Develop an Al-powered research assistant with [AI model].	
3 Build an app that uses [AI model] for text analysis.	

,

 Make a research assistant with [AI model]. Create a tool that uses [AI model] for real-time analysis. Build a chatbot that uses [AI model] for quick responses. Make an app that uses [AI model] for text processing. Build an app that uses [AI model] for content analysis. Create a tool that uses [AI model] for writing assistance. Make a research helper with [AI model]. Create a tool that uses [AI model] to explain complex topics Make a writing assistant that uses [AI model] for real-time text analysis. Make a tool that uses [AI model] for real-time text analysis. Generate blog posts and display them using [Markdown Renderer]. 	
 Build a chatbot that uses [AI model] for quick responses. Make an app that uses [AI model] for text processing. Build an app that uses [AI model] for content analysis. Create a tool that uses [AI model] for writing assistance. Make a research helper with [AI model] . Create a tool that uses [AI model] to explain complex topics Make a writing assistant that uses [AI Model] for essay structure. Make a tool that uses [AI model] for real-time text analysis. 	Make a research assistant with [AI model].
 Build a chatbot that uses [AI model] for quick responses. Make an app that uses [AI model] for text processing. Build an app that uses [AI model] for content analysis. Create a tool that uses [AI model] for writing assistance. Make a research helper with [AI model] . Make a tool that uses [AI model] for real-time text analysis. 	① Create a tool that uses [AI model] for real-time analysis.
 Make an app that uses [AI model] for text processing. Build an app that uses [AI model] for content analysis. Create a tool that uses [AI model] for writing assistance. Make a research helper with [AI model]. Create a tool that uses [AI model] to explain complex topics Make a writing assistant that uses [AI Model] for essay structure. Make a tool that uses [AI model] for real-time text analysis. 	
 ③ Build an app that uses [AI model] for content analysis. ⑤ Create a tool that uses [AI model] for writing assistance. ⑥ Make a research helper with [AI model]. ⑥ Create a tool that uses [AI model] to explain complex topics ⑥ Make a writing assistant that uses [AI Model] for essay structure. ⑥ Make a tool that uses [AI model] for real-time text analysis. 	③ Build a chatbot that uses [AI model] for quick responses.
 ③ Build an app that uses [AI model] for content analysis. ⑤ Create a tool that uses [AI model] for writing assistance. ⑥ Make a research helper with [AI model]. ⑥ Create a tool that uses [AI model] to explain complex topics ⑥ Make a writing assistant that uses [AI Model] for essay structure. ⑥ Make a tool that uses [AI model] for real-time text analysis. 	
 ① Create a tool that uses [AI model] for writing assistance. ① Make a research helper with [AI model]. ① Create a tool that uses [AI model] to explain complex topics ① Make a writing assistant that uses [AI Model] for essay structure. ① Make a tool that uses [AI model] for real-time text analysis. 	Make an app that uses [AI model] for text processing.
 ① Create a tool that uses [AI model] for writing assistance. ① Make a research helper with [AI model]. ① Create a tool that uses [AI model] to explain complex topics ① Make a writing assistant that uses [AI Model] for essay structure. ① Make a tool that uses [AI model] for real-time text analysis. 	
 Make a research helper with [AI model]. Create a tool that uses [AI model] to explain complex topics Make a writing assistant that uses [AI Model] for essay structure. Make a tool that uses [AI model] for real-time text analysis. 	Build an app that uses [AI model] for content analysis.
 Make a research helper with [AI model]. Create a tool that uses [AI model] to explain complex topics Make a writing assistant that uses [AI Model] for essay structure. Make a tool that uses [AI model] for real-time text analysis. 	
 Create a tool that uses [AI model] to explain complex topics Make a writing assistant that uses [AI Model] for essay structure. Make a tool that uses [AI model] for real-time text analysis. 	① Create a tool that uses [AI model] for writing assistance.
 Create a tool that uses [AI model] to explain complex topics Make a writing assistant that uses [AI Model] for essay structure. Make a tool that uses [AI model] for real-time text analysis. 	
Make a writing assistant that uses [AI Model] for essay structure. Make a tool that uses [AI model] for real-time text analysis.	① Make a research helper with [AI model] .
Make a writing assistant that uses [AI Model] for essay structure. Make a tool that uses [AI model] for real-time text analysis.	
③ Make a tool that uses [AI model] for real-time text analysis.	① Create a tool that uses [AI model] to explain complex topics
③ Make a tool that uses [AI model] for real-time text analysis.	
	Make a writing assistant that uses [AI Model] for essay structure.
Generate blog posts and display them using [Markdown Renderer] .	① Make a tool that uses [AI model] for real-time text analysis.
Generate blog posts and display them using [Markdown Renderer] .	
	(i) Generate blog posts and display them using [Markdown Renderer] .

Q

Images & Vision

Leverage cutting-edge vision APIs for image analysis, enhancement, and generation. Lovable supports:

 $\begin{tabular}{ll} \hline (3) & Build a wiki that uses & [Markdown Renderer] & to display Al-generated content from [Al model]. \\ \hline \end{tabular}$

- GPT-4 Vision
- Stable Diffusion
- DALL-E
- Pexels
- Exa
- among others.

Example prompts to get started:

(i)) Let users	upload p	hotos and	analyze	them usir	ng [AI	model]	
-----	-------------	----------	-----------	---------	-----------	--------	--------	--

Generate high-quality product photos with AI enhancements.

Lovable

i	Create a tool that uses	[AI model]	for logo generation.

- i Let users describe art and use [AI model] to generate it.
- Create Al-generated artwork based on descriptions.
- i Find stock photos of specific objects using Pexels .
- i Find me a video of a dog playing fetch with Pexels .
- i Retrieve the latest Al research papers with Exa .
- i Get latest tech news articles with Eva .
- Detect faces and emotions in images.
- i Improve image resolution automatically.

UI Components

For accessible design and reusable UI components, we recommend using:

- 21st.dev
- Chakra UI
- shadcn/ui.

See our best Tailwind CSS components guide for more.

 Add a form using 	[Chakna III]	components

- i) Build a dashboard with [Chakra UI] layout.
- i Create a responsive navbar using [shadcn/ui] .
- i) Use the [shadcn/ui] dialog component for a popup form.
- Develop a settings panel using [shadcn/ui].
- Implement a calendar component for scheduling.

Q

Audio processing

Eleven Labs is a to	p choice for high-	-quality integrations.
---------------------	--------------------	------------------------

- Convert speech to text
- Generate natural-sounding voices
- Enhance audio files

Example prompts to get started:

i	Convert uploaded audio files to text using audio transcription.
i	Build a podcast transcription tool.
i	Read content aloud using Text-to-Speech.
i	Develop an audiobook creator.
i	Transcribe and summarize meeting recordings.
i	Implement voice-controlled UI interactions.
i	Generate lifelike synthetic voices.

Maps

Using ${\tt Mapbox},\ {\tt Google}\ {\tt Maps},\ {\tt and}\ {\tt Weather}\ {\tt APIs}$, enhance your applications with:

- geolocation
- mapping
- business insights

Example prompts to get started:

example prompts to get started:	
i Display store locations on a map with [Mapbox].	
③ Create a delivery tracking system with real-time updates.	
① Build a property listing app using [Google Maps] .	

i Build a local business directory with [Google business data] .

i Find restaurants using [Google business data].

Show real-time weather updates using [Weather API] .

i Implement a route planner for travel optimization.

Documents

You can:

- create and download PDFs programmatically
- extract and convert text from PDFs
- process scanned documents
- transform files between various formats
- generate QR codes for links, data, and business applications

(i) Let users fill out a form and use [PDF Generation]	to download it.
Generate invoices as PDFs using [PDF Generation]	

- Create a resume builder that exports to PDF.
- i Extract text from scanned documents with [PDF Parser] .
- i Build a document analyzer with [PDF Parser].
- ① Create a PDF search tool using [PDF Parser].
- i Let users scan documents with [Document Scanner].
- Build a receipt tracker using [Document Scanner].
- (i) Convert PDFs to images with [File Conversion] .
- i Build a document converter with [File Conversion] .
- Generate QR codes for links and business details.
- (i) Make a URL shortener with QR codes using [QR Code] .

Q

,

Media & Entertainment

Yo	u c	:a	n

- retrieve media data
- track sports stats
- search for movies, TV shows, anime, and books

Example prompts to get started:

Build a movie recommendation system using [TMDb] .
③ Track upcoming TV shows with [Movies and TV Series] .
① Make a watchlist app with [Movies and TV Series / TMDb] .
⑤ Find details on "The Dark Knight" using [TMDb] .
③ Build an anime discovery tool.
③ Create a manga reading list.
Make an anime recommendation system.
③ Create a fantasy [Sport] prediction app.
③ Create a fantasy [Sport] helper.
Make a game prediction tool.
Build a book discovery app with [Book Search] .
③ Create a reading list manager.
Develop a personalized book recommendation engine.

Web Tools

You can:

- extract valuable insights from any website
- seamlessly translate text between languages

Q

>

Scrape top search results from [Google Search] using [Web Scraper] .
③ Translate text dynamically using [Google Translate] .
i Build a language learning app using [Google Translate] .
i Search the web using [Google Search] .
Build a trending topic analyzer with [Google Search] .
(i) Find images using [Google Image Search] .
© Create a visual research assistant using [Google Image Search] .
Automate competitor analysis by extracting key data from websites.
Develop a web scraping tool for market research.

Business

You can seamlessly:

- calculate accurate sales tax
- conduct in-depth search term analysis
- create interactive and dynamic data visualizations
- validate email addresses in real-time
- check domain information
- detect harmful or offensive content
- integrate chat and notification features
- send transactional emails
- efficiently manage email campaigns with built-in automation

Calculate order totals with	[US Sales Tax Calculator] .

- i Build an e-commerce checkout.
- (i) Create a pricing tool.

i	Create an SEO analyzer.
i	Display sales data in a Charts line graph.
i	Create an analytics page.
i	Check email addresses and create an email validation system.
i	Build a signup form with [GitHub] .
i	Build a domain inspector tool using [Domain Inspector] .
i	Build a safe chat app using [OpenAI Moderation] .
i	Send order confirmations via [Line] .
i	Create a broadcast system using [Line].
i	Send order confirmations with [Resend].
i	Create a newsletter system with [Resend].
i	Validate email addresses using [NeverBounce] .
i	When using [NeverBounce], check if these emails are valid and save the results.
i	Develop an automated sales forecasting tool.
i	Implement AI-driven lead scoring.
